Data Destruction Policy
Business Collections

- All data bearing Items are delivered directly back to CIYG
- All data bearing items are processed within 24hrs of arrival
- All items (including data bearing items) are individually tracked throughout the entire process

Data Destruction

Data destruction is achieved by licensed software using a 3 pass overwrite method (DoD 5220.22-M) with verification.

Degaussing

If a data bearing device is unable to complete the overwrite process, the device will be degaussed rendering re-use or access to previous data impossible.

Reporting

A detailed report on the time, date, method and success of the data wiping process is provided for all data bearing devices processed under a CIYG business collection.
